

Belval, Differdange & Rodange sites (AMBDR)

ArcelorMittal

Environnement et Energy Charter

ArcelorMittal's Belval, Differdange and Rodange sites are committed to producing steel while maintaining a sustainable balance between their economic objectives and environmental protection and energy conservation.

The impact of the company's activities on the environment will be reduced to a minimum, consistent with the use of the best available technology, through economically viable investments.

To achieve their environmental and energy objectives, Belval, Differdange and Rodange sites apply the following principles:

- To continuously improve environmental performance, reduce environmental nuisance, and lower energy consumption,
- To apply national and European legislation and any commitments entered into by the companies,
- To ensure the rational use of natural resources and energy,
- To optimise our potential for dissipated energy,
- To integrate environmental quality criteria in production methods and the design of new projects,
- To encourage the design and purchase of energy efficient products and services,
- To optimally reduce and control the risks of accidental pollution,
- To monitor environmental and energy performance using an environmental management system,
- To promote an attitude of respect for the environment and the principles of this Environment and Energy Charter by providing information and training for our staff and those of our subcontractors,
- To communicate openly with all partners and stakeholders.

The management of Belval, Differdange and Rodange sites calls on its employees at all levels to observe the principles listed above.
